                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 .
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                arginiosuccinate lyase (EC 4.3.2.1) - Haemophilus influenzae (strain Rd KW20)
C:Species: Haemophilus influenzae
C;Date: 18-Aug-1995 #sequence_revision 18-Aug-1995 #text_change 16-Jul-1999
C;Accession: F64095
R;Fleischmann, R.D.; Adams, M.D.; White, O.; Clayton, R.A.; Kirkness, E.F.; Kerlavage
F;Gocayne, J.D.; Scott, J.; Shirley, R.; Liu, L.I.; Glodek, A.; Keiley, J.M.; Weldman, O.M.; Brandon, R.C.; Fine, L.D.; Fritchman, J.L.; Fuhrmann, J.L.; Geoghagen, N.S.M.
Science 269, 496-512, 1995
A;Authors: Gnehim, C.L.; McDonald, L.A.; Small, K.V.; Fraser, C.M.; Smith, H.O.; Vente
A;Althors: Gnehim, C.L.; McDonald, L.A.; Small, K.V.; Fraser, C.M.; Smith, H.O.; Vente
A;Fitle: Whole-genome random sequencing and assembly of Haemophilus influenzae Rd.
A;Reference number: A64000; MUID:95350630
A;Recession: F64095
A;Status: nucleic acid sequence not shown; translation not shown
A;Molecule type: DNA
A;Residues: 1-457 <TIGR>
A;Cross-references: GB:U32763; GB:L42023; NID:g1573817; PIDN:AAC22470.1; PID:g1573823
C;Superiamily: argininosuccinate lyase
C;Keywords: amidine-lyase; carbon-nitrogen lyase
                                                                 RESULT 2

A., Title: Genome sequence of the radioresistant bacterium Deil
A; Reference number: A75250; MUID:20036896
A; Accession: G75293
A; Status: preliminary
A; Molecule type: DNA
A; Residues: 1-268 <WHI>
A; Cross-references: GB:AE002060; GB:AE000513; NID:g6460082; LA; Experimental source: strain R1
C; Genetics: A; Gene: DR2283
A; Map position: 1
C; Superfamily: conserved hypothetical protein H10360
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  s.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Searched:
                       Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Score
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               44 45

J. Cell Biol. 143:375-389(1998).
I. FUNCTION: HAS A ROLE IN CELL MORPHOGENESIS AND CELL FUSION AND M. ANTAGONIZE THE PKC1 PATHWAY.
INTRACONIZE THE PKC1 PATHWAY.
INTERACTS WITH KEL2.
ISIMILARITY: CONTAINS 5 KELCH REPEATS.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          yay
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       0
```

1,5-lactone 6-phosphate + NADPH.
PATHWAY: FIRST STEP IN PENTOSE PHOSPHATE PATHWAY.
SIMILARITY: BELONGS TO THE GLUCOSE-6-PHOSPHATE DEHYDROGENASE FAMILY.

Gamma-glitamyl phosphate reductase (GPR) (FC 1.2.1.41) (Glutamate-5-
semialdehyde dehydrogenase) (Glutamyl-gamma-semialdehyde
dehydrogenase) (GSA dehydrogenase).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Devine K.W.;
Sequence of the Bacillus subtilis genome between xiyA and ykoR.";
Sequence of the Bacillus subtilis genome between xiyA and ykoR.";
Submitted (NOV-1997) to the EMBL/GenBank/DDBJ databases.

1 FUNCTION: CATALYZES THE NADPH DEPENDENT REDUCTION OF L-GAMMA-
GLUTAMAT. 5-PHOSPHATE INTO L-GLUTAMATE 5-SEMIALDENYDE AND
PHOSPHATE. THE PRODUCT SPONTANEOUSLY UNDERGOES CYCLIZATION TO E

1 FYRROLINE 5-CARBOXYLE.

1 CATALYTIC ACTIVITY: L-Glutamate 5-semialdehyde + phosphate +
NADP(+) = L-gamma-glutamay 15-phosphate + NADPH.

1 NADP(+) = L-gamma-glutamy 15-phosphate + NADPH.

1 SUBCELULAR LOCATION: CYTOPLASMIC (By SIMILATITY).

1 SIMILARTYY: BELONGS TO THE GAMMA-GLUTAMYL PHOSPHATE REDUCTASE
FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Bacillus subtilis.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                FUNCTION: PRODUCES ATP FROM ADP IN THE PRESENCE OF A PROTON GRADIENT ACROSS THE MEMBRANE. THE ALPHA CHAIN IS A REGULATORY SUBUNIT (BY SIMILARITY).

SUBUNIT: F-TYPE ATPASES HAVE 2 COMPONENTS, CF(1) - THE CATALY CORE - AND CF(0) - THE MEMBRANE PROTON CHANNEL. CF(1) HAS FIV SUBUNITS: ALPHA(3), BETA(3), GAMMA(1), DELTA(1), EPSILON(1). HAS THREE MAIN SUBUNITS: A, B AND C (BY SIMILARITY).

SUBCELLULAR LOCATION: CHLOROPLAST THYLAKOID MEMBRANE (BY

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to a peptide conjugate having the formula:

(C (R-X))n-peptide where n = 1.10; X = C=0, when the R-X group is attached

(C to the N-terminus of the peptide, or a side chain of the peptide where

(C the functional group of the side chain is NH2 or OH; or X = O or NH,

(C when the R-X group is attached to the C-terminus of the peptide, or a

(C side chain of the peptide, where the side chain functional group is COOH

(C or CONH2; and R = 2-18C alkyl or alkoxy, 2-14C alkylenyl containing one

(C or two double bonds, cyclobutyl, cyclopentyl, cyclohexyl optionally

(C monosubstituted with a 1-5C straight or branched chain alkyl group,

(C phenyl optionally monosubstituted with a 1-5C straight or branched chain

(C of alkyl group, or benzyl. The peptides AAB37001-B37058 represent examples

(C of a Bcl-2 superfamily polypeptide corresponding to amino acids 72-97 of

(C the BH3 domain of the cell death agonist Bad. The peptide conjugate is

(C useful for modulating apoptosis in the cells of a subject, or for

(C apoptosis in cancer cells. It is also useful for inhibiting Bcl-2

(C function. In particular, the peptide conjugate is useful for treating a

(C subject afflicted with a cancer characterized by cancer cells that

(C express Bcl-2. The cancer includes prostate, colorectal, gastric,

(C acute or chronic lymphocytic and non-lymphocytic leukemia. The peptide

(C conjugate is also useful for treating disorders characterized by

(C immunodeficiency syndrome (AIDS), stroke or myocardial infarction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to a peptide conjugate having the formula:

CC (R-X)n-peptide where n = 1-10; x = C=0, when the R-X group is attached CC to the N-terminus of the peptide, or a side chain of the peptide, where the N-terminus of the peptide where CC when the R-X group is attached to the C-terminus of the peptide, or a CC side chain of the peptide, where the side chain is NH2 or OH; or X = O ON NH, CC when the R-X group is attached to the C-terminus of the peptide, or a CC side chain of the peptide, where the side chain functional group is COH or CONH2; and R = 2-18C alkyl or alkoxy, 2-14C alkylenyl containing one CC or two double bonds, cyclobutyl, cyclopentyl, cyclohexyl optionally CC monosubstituted with a 1-5C straight or branched chain alkyl group, or benzyl. The peptides Ah837001-837058 represent analogues of the peptide portion of the conjugate. The peptides represent analogues CC of a Bcl-2 superfamily polypeptide corresponding to amino acids 72-97 of cuseful for modulating apoptosis in the cells of a subject or for concurrence cells. It is also useful for inhibiting Bcl-2 (apoptosis in cancer cells. It is also useful for inhibiting Bcl-2 (apoptosis in cancer cells. It is also useful for treating a subject or chronic lymphocytic and non-lymphocytic leukemia. The peptide conjugate is useful for treating a concer characterized by cancer cells that concersed apoptosis, e.g. neurodegenerative disorders, acquired inmunodeficiency syndrome (AIDS), stroke or myocardial infarction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Best Loc

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Qγ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              CC (R-X)n-peptide where n = 1-10; X = C-0, when the R-X group is attached CC to the N-terminus of the peptide, or a side chain of the peptide where CC the functional group of the side chain is NH2 or OH; or X = O Or NH, CC when the R-X group is attached to the C-terminus of the peptide, or a side chain functional group is attached to the C-terminus of the peptide, where the side chain functional group is COOH CC or COOH32; and R = 2-18C alkyl or alkoxy, 2-14C alkylenyl containing one CC or two double bonds, cyclobutyl, cyclopentyl, cyclobaryl optionally CC or consubstituted with a 1-5C straight or branched chain alkyl group, or benzyl monosubstituted with a 1-5C straight or branched chain alkyl group, or benzyl. The peptides ABB37001-B37058 represent analogues CC of the peptide portion of the conjugate. The peptides represent analogues CC of the peptide portion of the conjugate. The peptides represent analogues CC of BBC1-2 superfamily polypeptide corresponding to amino acids 72-97 of CC corresping B cell lymphoma/lenkemia 2 (BC1-2) mediated blockage of apoptosis in cancer cells in the cells of a subject, or for CC group cell straight or peptide conjugate is CC subject afflicted with a cancer characterized by cancer cells that CC express Bc1-2. The cancer includes prostate, colorectal, gastric, CC conjugate is also useful for treating a service or chronic lymphocytic and non-lymphocytic leukemia. The peptide conjugate is also useful for treating disorders, acquired innuncodeficiency syndrome (AIDS), stroke or myocardial infarction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match

CC (R-X)n-peptide where n = 1-10; x = C=0, when the R-X group is attached CC to the N-terminus of the peptide, or a side chain of the peptide where CC the functional group of the side chain of the peptide or NH, CC when the R-X group is attached to the C-terminus of the peptide or NH, CC when the R-X group is attached to the C-terminus of the peptide or NH, CC or CONH2; and R = 2-18C alkyl or alkoxy, 2-14C alkylenyl containing one CC or two double bonds, cycloburyl represent analysis on the peptide where the side chain functional group is COOH CC or consubstituted with a 1-5C straight or branched chain alkyl group, CC phenyl optionally monosubstituted with a 1-5C straight or branched chain alkyl group, or benzyl. The peptides ABB37001-B37058 represent analogues CC of the peptide portion of the conjugate. The peptides represent analogues CC of a Bcl-2 superfamily polypeptide corresponding to amino acids 72-97 of CC corresponds in cancer cell death agonist Bad. The peptide conjugate is CC useful for modulating apoptosis in the cells of a subject, or for CC apoptosis in cancer cells. It is also useful for inhibiting Bcl-2 (function. In particular, the peptide conjugate is useful for treating a CC subject afflicted with a cancer characterized by cancer cells that CC express Bcl-2. The cancer includes prostate, coloractal gastric, conjugate is also useful for treating dastric, and constant or chronic lymphocytic and non-lymphocytic leukemia. The peptide conjugate is also useful for treating dastric, and conserved is also useful for treating dasorders, acquired to increased apoptosis, e.g., neurodegenerative disorders, acquired to increased apoptosis, e.g., neurodegenerative disorders, acquired conjugate is also useful for treating dasorders acquired in the conjugate is acquired to increased apoptosis, e.g., neurodegenerative disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New peptide conjugates for modulating apoptosis or for inhibiting cell lymphoma/leukemia 2 (Bpl-2) function, especially useful for treating neurodegenerative disorders, stroke, or cancer

                                                                                                             peptide;
                                                                                                              28
```

Bc12 polypeptide BH3 domain

peptide #55

28-FEB-2001

(first entry)

Cytostatic; neuroprotective; anti-HIV; virucide; cerebroprotective; cardiant; Bcl-2 superfamily; BH3 domain; cell death agonist; Bad; apoptosis modulation; B cell lymphoma/leukemia 2; cancer; prostate; colorectal; gastric; non-small lung; renal; thyroid; neuroblastoma; melanoma; lymphocytic leukemia; neurodegenerative disorder; AIDS; myocardial

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  CC (R-X)n reprilde where n = 1-10; x = C=0, when the R-X group is attached CC to the N-terminus of the peptide, or a side chain of the peptide where ct the functional group of the side chain of the peptide, or a side chain of the peptide, or a side chain of the peptide, or a side chain of the peptide, or a side chain of the peptide, or a side chain of the peptide, or a side chain of the peptide, or a side chain functional group is containing one conditions of the peptide, or a side chain functional group is COH CONHI; and R = 2-18C alkyl or alkoxy, 2-14C alkylenyl containing one or conhiz; and R = 2-18C alkyl or alkoxy, 2-14C alkylenyl containing one corresponds of the peptide with a 1-5C straight or branched chain alkyl group, or benzyl. The peptides AAB37001-33705 represent analogues of the peptide portion of the conjugate. The peptides represent analogues cof a hal-2 superfamily polypeptide corresponding to maino acids 72-97 of cuseful for modulating apoptosis in the cells of a subject, or for creversing B cell lymphoma/leukemia 2 (Bcl-2)-mediated blockyge of apoptosis in cancer cells. It is also useful for threating a subject a subject a fflicted with a cancer characterized by cancer cells that cancer characterized by cancer cells that cancer or chronic lymphocytic and non-lymphocytic eventual, gastric, con-small lung, renal or thyroid cancers, neuroblastoma, melanoma, or cancer or chronic lymphocytic and non-lymphocytic everative disorders, acquired increased apoptosis, e.g. neurodegenerative disorders, acquired increased apoptosis, e.g. neurodegenerative disorders, acquired increased apoptosis, e.g. neurodegenerative disorders, acquired conjugate is also useful for treating disorders characterized by cancer rice in the conjugate is also useful for streating disorders characterized by cancer calls that cancer characterized by cancer in the cancer characterized by cancer in the cancer characterized by cancer in the cancer characterized by cancer in the cancer characterized by cancer in the cancer characteri
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match 100.0%; Score 138; DB 21;

Bad is a 22.1 kD protein which interacts with bcl-2 and bcl-x proteins and regulates cell death. It has homology to the bcl-2-related family clustered in the BH1 and BH2 domain. Bad has been found to hybridise to bcl-x(L) and bcl-2 in yeast two-hybrid assays and in vivo in mammalian cells. Overexpressed Bad counters the death inhibitory activity of bcl-x(L) but is much less effective at countering the death inhibitory activity of bcl-2. Bad expression can accelerate apoptotic cell death induced by cytokine deprivation in an II-3 dependent cell line expressing bcl-x(L). Bad its also counters the death repressor activity of bcl-x(L). Bad competes which inhibit its binding to bcl-x(L). Bad may be used to identify agents which inhibit its binding to bcl-x(L) are bcl-x(L) to form heterodimers. Such agents may be used to treat neurodegenerative diseases, immunodeficiency diseases, c. e.g. AIDS, senescence or ischaemia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Polynucleotide encoding bcl-x(L), Dcl-2 associated death promoter useful to treat neoplasia and apoptosis and to identify agents inhibiting its binding to bcl-2 or bcl-x(L) to form heteromultimers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      WPI; 1996-251465/25.

                                                                                                                                                                                                                                                                                                                                                                                                CC The present invention describes mutant BAD (BCL-XL/BCL-2 associated cell composition 112 and/or 136, relative to the murine BAD 204 as sequence. The present sequence is the murine BAD protein also described are: (1) creases intracellular delivery. Mutant BAD protein sequences cell viability; (2) cc fragments of mutant BAD protein able to decrease cell viability; (2) cc fusion proteins of mutant BAD protein able to decrease cell viability; (2) cc fusion proteins of mutant BAD proteins are used to treat increases intracellular delivery. Mutant BAD proteins are used to treat cc prevent diseases associated with reduced apoptosis, e.g. cancer, cc viral infection, lymphoproliferation, arthritis, infertility, created to proteins and autoimmune disease. Polynucleotide sequences encoding cmutant BAD proteins can be used similarly by gene therapy or to produce transgenic animals for use as disease models or in drug screening. BAD proteins phosphorylated at specified Ser are used to screen for enhancers and inhibitors of serine-phosphatase. Inhibitors are potentially useful cell interestive amounts of phosphorylated and noncephorylated BAD, by usual immunoassays. Mutant BAD proteins have composphorylated BAD, by usual immunoassays. Mutant BAD proteins have composphorylated and the specified Ser, forming a product that does not cell heterodimerise with BCL-2 or BCL-XL but instead binds to 14-3-3 family certains in the cytosol, thus promoting cell survival. The mutants with car substituted cannot bind 14-3-3.
                                                                                                                                                                                                                                                                                                                                                                             В

                                                                                                                                                                                       Qy
                                                                                                                                                                                                                                                                                                  The present invention describes mutant BAD (BCL-XL/BCL-2 associated cell Cd death regulator) proteins, having an amino acid other than Ser at CC position 112 and/or 136, relative to the murine BAD 204 as sequence. The CC present sequence represents a mutant BAD protein Also described are: (1) CC fision proteins of mutant BAD protein able to decrease cell viability; (2) CC fusion proteins of mutant BAD protein able to decrease cell viability; (2) CC fusion proteins of mutant BAD protein BAD proteins are used to treat CC or prevent diseases associated with reduced appotosis, e.g. cancer, CC viral infection, lymphoproliferation, arthritis, infertility, cancer, CC viral infection, lymphoproliferation, arthritis, infertility, cancer, CC viral infection, and autoimmune disease. Polymucleotide sequences encoding CC mutant BAD proteins for use as disease models or in drug screening. BAD cc proteins phosphorylated at specified Ser are used to screen for enhancers CC and inhibitors of serine-phosphatase. Inhibitors are potentially useful caping or isohaemic cell death. The apoptotic status of cells is caping or isohaemic cell death. The apoptotic status of cells is cell sering activity than wild-type BAD which can become CC phosphorylated on the specified Ser, forming a product that does not cell phosphorylated on the specified Ser, forming a product that does not consider the cytosol, thus promoting cell survival. The mutants with cCC ser substituted cannot bind 14-3-3.
                                                                                                                                                                                                                    Query Match
